EXPERIENCE

BehindThePixel

Jun. 2024 – Present

Technical Project Lead & Full-Stack Developer

Palma, Spain / Barcelona, Spain

- Led a technology-focused SME delivering software solutions across media, AI and digital platforms
- Managed client relationships and project requirements while coordinating the full software development lifecycle
- Designed and developed full-stack architectures and scalable systems for web platforms and automated services
- Designed and implemented **AI-driven systems** for automated content programming and recommendation
- **Clients:** Musicalitat, Produccions Blau, Vibra Hotels, Unió de Consells Esportius de Catalunya, Lottusse, Discmedi, Govern de les illes Balears among others

NTT DATA

Feb. 2026 – Jun. 2026

Backend Developer Intern

Granada, Spain

- Worked as a backend development intern contributing to enterprise software solutions for the **BBVA** client
- Developed and maintained backend services and APIs for internal banking platforms
- Collaborated with senior developers and multidisciplinary teams following **Agile methodologies**

PROJECTS

AI-Driven Autonomous Radio Platform

Industry Client Project | 2025

- Designed and developed an **AI-powered radio system** capable of automatically generating music programming based on audience behavior and time-of-day patterns
- Implemented machine learning models using **Python and PyTorch** to analyze listening trends and dynamically curate playlists
- Built the full-stack platform with **PHP, MySQL and Docker**, enabling autonomous scheduling and real-time content management
- **Client:** Musicalitat

Online Music Store Platform for Record Labels

Industry Client Project | 2024

- Developed a scalable **full-stack e-commerce platform** for music distribution and merchandising
- Implemented product catalog management, digital content delivery and payment-ready architecture
- Designed the database structure and backend services using **PHP and MySQL**
- **Client:** Produccions Blau

Neural Network Adaptation after Class Modification

Bachelor Thesis | 2026

- Research project focused on **adapting trained neural networks after class modifications** while minimizing retraining cost
- Explores techniques related to **incremental learning, transfer learning and model fine-tuning**

- Designed experiments to measure **training efficiency, accuracy preservation and computational cost**
- Applications in dynamic classification systems where classes evolve over time

Red Panda Algorithm Metaheuristic Evaluation

Research Project | 2026

- Conducted a research study analyzing the **performance of the Red Panda Optimization Algorithm** compared with established metaheuristics
- Evaluated the algorithm against techniques such as **Genetic Algorithms and Local Search among others**
- Implemented experimental benchmarks using **C++ and scientific computing libraries**
- Analyzed convergence speed, solution quality and computational efficiency across multiple dimensions
- Provided a comparative study highlighting strengths and limitations of the Red Panda metaheuristic in complex search spaces

Real-Time Tennis Match Analysis

Computer Vision Project | 2025-2026

- Developed a **computer vision system** to analyze tennis matches in near real-time using video streams
- Implemented player, ball and court tracking techniques to extract **game events and details**
- Applied image processing and deep learning methods using **Python, PyTorch and OpenCV**
- Designed a full pipeline to process the whole video, detect and track key elements
- Explored applications for **sports analytics and performance analysis**

EDUCATION

Universidad de Granada (UGR)

Bachelors Degree in Computer Science (Specialization in Intelligent Systems)

Granada, Spain

- **Academic Performance:** Consistently ranked within the **top 5-10% percentile** across coursework
- **WorkStudy Balance:** Completed the degree while working professionally in software development
- **Coursework:** Machine Learning (10/10), Computer Vision (Highest Honors), Artificial Intelligence, Metaheuristics (10/10), Knowledge Engineering, Data Structures, Algorithms, Linear Algebra (Highest Honors), Statistics
- **Research:** Undergraduate thesis focused on Artificial Intelligence and Computer Vision

SKILLS

Programming : Python, C++, C , Java, PHP, SQL (MySQL)

AI / Machine Learning : PyTorch, TorchVision, Scikit-learn, NumPy

Tools : Docker, Trello, Google Analytics, GitHub, Overleaf, OpenCV, Kaggle

Areas of Interest : Image Processing, Machine Learning , Data Analysis, CNN-based Models

Languages : English (Level: Advanced | Certified: B1.2), Spanish (Level: Native), Catalan (Level: Native)
